

# MYTHBUSTERS

## The Scientific Method in Action

### THE SCIENTIFIC METHOD:

Question → Hypothesis → Experiment → Observe/Collect Data → Conclusion → Communicate

1. What is the QUESTION in the episode?

---

---

2. What was Jamie's hypothesis?

---

---

3. What is YOUR hypothesis?

---

---

---

4. How did they collect their data? (Or how could they have?)

---

---

5. What did they conclude?

---

---

6. Was your hypothesis correct?

---

---

**Remember that it's OKAY for your hypothesis to be incorrect! It's all part of the learning process. Without a hypothesis, you will never be able to be 100% involved in your experiments and you have nothing to prove or disprove.**
